Skill Check 3 Review FRQ
AP Computer Science A

Name _____ Period_____

1. Write code that could be used to reverse a number and store the reversed number in a variable called `reversed`. Your code should work for any number with 4 digits. Consider the int data type below,

```
int number = 1234;
```

When your code is ran, "4321" should be stored in `reversed`.

Below are more examples,

int data type	**reversed**
`int n1 = 3455;`	`5543`
`int n2 = 8767;`	`7678`
`int n3 = 2468;`	`8642`
