AP CSA // SMARTYTRACKER REPORTING

LEARNING & GRADING GUIDE

{ evidence -> feedback -> growth -> mastery }

AP Computer Science A

How Your Grade Is Built

1. Learning intentions define the broad goals of the course.
2. Success criteria describe the specific knowledge and skills you must demonstrate.
3. Course activities create evidence that may connect to one or more success criteria.
4. SmartyTracker organizes that evidence so your teacher can determine your current level of mastery and report your course grade.

Your grade is based on what the full body of evidence shows you can do - not on an average of assignment categories.

What SmartyTracker Shows You

5. Your current level on each required success criterion
6. The skill checks, labs, projects, practice, and other evidence connected to that criterion
7. Teacher feedback, growth over time, and the learning story behind your current course grade

> **REPORTING** Infinite Campus records the official course grade. SmartyTracker explains how your classroom evidence translates into that grade.

The Mastery Scale

SmartyTracker reports progress on each success criterion using the course mastery scale. Mastery is the target; extended mastery recognizes learning beyond the target and is not required.

LEVEL	STATUS	WHAT IT MEANS
0	Insufficient Evidence	There is not yet enough valid evidence to determine your current level.
1	Emerging	You are beginning to demonstrate the skill, but gaps or significant support remain.
2	Approaching	You demonstrate much of the skill, but the result is partial or not yet consistent.
3	Master	You independently and consistently meet the course expectation.
4	Extended	You transfer, connect, or apply the skill beyond the expected level.

The Evidence Structure

These familiar routines remain central. They create timely evidence of learning; they are not separate percentage buckets.

EVIDENCE SOURCE	HOW IT SUPPORTS LEARNING	KEY EXPECTATIONS
Tickets Out the Door	Guided practice during instruction helps you process new ideas and gives your teacher timely feedback.	Complete them if absent. Related tickets must be current before reassessment; all are due by the quarter cutoff.
Weekly Skill Checks	At the end of most weeks, a brief handwritten check provides independent evidence of the concepts and skills developed through notes, Tickets Out the Door, and labs.	Complete each scheduled check independently, without an IDE or AI. Missed skill checks must be completed by the quarter cutoff on page 3.
Lab Guides + Coding Labs	Guided reasoning and code challenges develop and demonstrate programming skills.	Complete the lab guide before code challenges are evaluated. No late penalty; all labs are due by the quarter cutoff.
Quarterly Projects	One project each quarter integrates multiple skills and provides culminating evidence across success criteria.	No late projects or corrections after the due date. Seek feedback early, and submit work that reflects your individual effort.

Completion alone is not mastery. The quality, independence, and consistency shown in the evidence determine what it demonstrates.

Reassessment, Deadlines & Responsibility

> **WHY REASSESS?** A reassessment is a new opportunity to demonstrate learning. If it provides stronger evidence, SmartyTracker will reflect the higher level of mastery; reassessment will not lower the level already demonstrated.

Skill Check Reassessment Policy

You may reassess an individual skill check completed during the original class period. Before reassessing, you must:

8. Be up to date on the labs and Tickets Out the Door connected to the skill check.
9. Complete the assigned College Board review.
10. Complete corrections and reflection on the original skill check.

All reassessments must be completed two weeks before the end of the quarter in which the original skill check was assigned.

Missed Skill Check Policy

If you miss a skill check, you must complete the alternate version to provide the missing evidence. Because the original skill check was not completed during the allotted class period, the alternate skill check receives one attempt and may not be reassessed.

All missed skill checks must be completed two weeks before the end of the quarter in which they were assigned.

Missing, Late, and Revised Work

11. In accordance with Boise School District policy, missing and revised work are accepted until two weeks before the end of the quarter in which they were assigned.
12. Work completed after its due date is late. Because on-time work receives priority, late work may not be evaluated until after the late-work cutoff during the final two weeks of the quarter.
13. Revised work also enters the later grading queue. Late or revised evidence will not change your displayed mastery levels or learning story until it has been reviewed.
14. The no-late-work rule for quarterly projects still applies.

Academic Integrity

You are encouraged to think with classmates and consult appropriate resources. However, the work you submit must demonstrate your own understanding. Identical or strikingly similar code cannot be used as evidence of your mastery and will receive no credit.

> **THE QUESTION YOUR GRADE SHOULD ANSWER** What can you demonstrate now? Check SmartyTracker regularly, use feedback, complete missing evidence, and reassess when you are ready to show growth.
